Maximum Marks	4 Marks

Empathy Map 🗨️

SAYS

What the user verbally expresses regarding the problem.

- "We need earlier warnings to evacuate high-risk zones safely."
- "The current data is too disjointed for rapid decision-making."
- "Public safety relies entirely on how fast we interpret the models."

💭 THINKS

What the user is privately thinking or worried about but might not say.

- "Are these predictions accurate enough to justify a mass evacuation?"
- "I need a unified dashboard correlating rainfall with soil saturation."
- "Late warnings or false alarms destroy public trust in our agency."

✂️ DOES

What actions the user physically takes to solve or work around the problem.

- Manually checks multiple meteorological and local river gauges.
- Coordinates response teams based on fragmented, latent reports.
- Conducts post-disaster analysis to justify emergency expenditures.

❤️ FEELS

The user's emotional state when dealing with the problem.

- Overwhelmed by massive volumes of unstructured climate data.
- Anxious about catastrophic consequences of a delayed response.
- Frustrated by slow, legacy government early-warning system..
