Customer Journey Map

Phase of Journey	Stage 1 (Awareness & Initiation)	Stage 2 (Data Input & Prediction)	Stage 3 (Analysis & Action)
Actions (<i>What does the customer do?</i>)	Opens the Flood Prediction Application during a heavy monsoon warning.	Inputs real-time environmental metrics (rainfall, humidity, temperature).	Evaluates the AIgenerated flood probability and reviews historical trends.
Touchpoint (<i>What part of the service do they interact with?</i>)	Web Browser / Landing Page.	HTML Form UI & Prediction Endpoint (/predict).	Results Dashboard & Database History Page (/history).
Customer Thought (<i>What is the customer thinking?</i>)	"I need to know immediately if the upcoming storm will breach safety thresholds."	"Are the data inputs I'm providing going to be processed accurately and quickly?"	"This 92% flood probability means I need to trigger evacuation protocols now."
Customer Feeling (<i>What is the customer feeling?</i>)	Anxious and timepressured due to worsening weather conditions.	Focused and reliant on the system's stability and speed.	Confident in the datadriven decision, but stressed by the impending crisis.
Process Ownership (<i>Who is in the lead on this?</i>)	User / Meteorologist	Flask Backend API (System)	Emergency Response Team
Opportunities (<i>How can we improvethis stage?</i>)	Add a geolocation auto-fill feature to pull live API weather data automatically.	Implement WebSocket real-time progress indicators for latency masking.	Integrate an automated SMS/Email alert system for instant stakeholder notification.
